

Burning Questions submitted with Registration (SMR Technology)

- Configuration Management for SMR Technologies
 - What interface configuration management do we need to think about for industrial user facilities for SMR energy (thermal and electric)?
 - How do we plan to bridge the gap between electricity demand and electricity supply? Are SMRs/new plants keeping up with the high demand for electricity?
 - What steps can be taken to transition from Document Centric to Data Centric Configuration Management?
 - EPRI 3002003126 Advanced Nuclear Technology: Data-Centric Configuration Management for Efficiency and Cost Reduction An Economic Basis for Implementation
 - EPRI 3002026572 Advanced Reactor Deployment Improvement Opportunities Using Model Based Systems Engineering (MBSE)
 - What are we/can we as a group be doing to engage with new players in the industry (Kairos, X-Energy, etc.)?
- Artificial Intelligence
 - How are you using AI in configuration management and administrative activities?
 - I don't have specific questions, but I'm interested in seeing how SMR Design Control may differ from what we do at existing sites, and how the industry has continued to adapt to AI progress since last year's meeting.
 - How are you using or planning to use Artificial Intelligence to develop engineering packages and maintain configuration control?
